

Heye Newsletter II, June 2016

INTRODUCTION

Dear customers and friends!

Last time we have promised to share more about our customer projects. Today, we are pleased to report from the Caribbean Sea and from Mexico. Thank you for your confidence in us.

Yours,
Dirk Pörtner

SUPERIOR THERMAL HOMOGENEITY WITH HEYE ROTOR MECHANISM

Delivering superior thermal homogeneity and top weight consistency, the Heye rotor mechanism has been widely adopted by the international hollow glass community, even by customers not operating the German company's advanced IS-Machines. The rotating movement of the rotor segments provides good thermal homogeneity of the glass melt, the equipment's proven design guaranteeing reliable functionality and a long lifetime. Retrofit installations are possible. [Learn more.](#)

HEYE WELCOMES JENS LANGER

On April 1, 2016, Jens Langer has started as Director Sales & Marketing at Heye International. Since many years, Jens has gained extensive experience as international Sales & Marketing Director as well as Head of Project Management in the

mechanical engineering industry. Now he will share his knowledge with Heye International to keep and develop the company's growth strategy. Welcome Jens!

campaign brings bottles to life.

Videos in supermarket stores in the UK, France, Italy, Spain and Poland show customers exactly what a glass bottle would say if it could talk.

[Enjoy the videos!](#)

HELPING CARIB GLASSWORKS TO DOUBLE PRODUCTION CAPACITY

Heye International is supporting Carib Glassworks Ltd in its efforts to double production capacity and develop potential sales opportunities for glass packaging in Cuba and other export markets. The only manufacturer of glass packaging in the Caribbean, Carib Glassworks is located in Port of Spain, Trinidad and has a rich history, dating back to 1948. The specialist glassworks is a member of the ANSA McAL Group of Companies, its founding fathers having laid the platform for a highly automated manufacturing facility, employing some of the best regional technical professionals.

Carib Glassworks produces both standard and custom-made containers in flint, green and amber for customers in the soft drinks, beer, food, alcohol and juice sectors. And this April, the glassworks has doubled production capacity to 70,000 tonnes/year via the commissioning of a second melting furnace and three production lines. See more at www.caribglass.com.

QUAD GOB IN MEXICO

Quad gob productions are always challenging and require a highly experienced production team. The glass plant's team in Monterey, Mexico has made a good job. Heye contributed the machine belt including the new high-speed servo-pusher, [type 2158](#) with three servo axis.

The optimized motion profile results in a parallel pusher movement to the conveyor belt. Most of the movable parts are located below the machine conveyor level inside the pusher housing, protecting them from environmental influences such as heat and dirt.
